

A Brief Process of Local Area Medicine

Thanusri Baaga*

Department of Medicine, University of Autonomous, India

DESCRIPTION

The Medical field, as part of medicine and an important subject for the study, is concerned about human capacity. It is expected to protect and enhance the well-being and prosperity of networks and communities through the Primary Health Care system. It regulates surgery and balances the health needs of the people, their well-being and later creates appropriate mechanisms and in fact and for all purposes and objectives to prevent and control diseases and to improve community hygiene through Health Promotion, Health Education and Health Protection. Public Health Preparation aims to support Primary Health Care professionals and physicians who can identify and manage general distress and medical conditions in the area closest to their entry points and the natural environment. Providers of essential medical services should have the power and ability to differentiate, focus and address the medical conditions of the local couple through the perspective of community pioneers and their strong cooperation and cooperation. The team doctor will be the compulsory head of the health team at the Primary Health Care level and is expert in education, health assessment and management skills. She develops a Community Health Strategy chair, plans and uses a grammatical support, is tailored accordingly to the immediate needs, and then evaluates these tests and health projects. As a primary health care provider, physicians can actually use the knowledge and skills acquired in various clinical studies during the MBBS course to treat common medical problems, assist the local community, through preventive, therapeutic, motivating, supportive, and rehabilitative measures. The MBBS study clarifies what is separated from Community Medicine research as the central theme of the MBBS education program Interns during the day Compulsory Rota-conservative Residential Internship in Community Medicine, will be fixed in this regard. Dozens of components of Primary Health Care and a contribution to the local community to assess their health needs and issues. The Division of Community Medicine will strive to be the focal point for clinical school

practice, testing, and management of medical services, both at the undergrad and PG level. A focus may be needed on achieving educational qualifications by Health Teaching and Training Specialists who will identify local health needs through regular communication. Fulfill a professional, ethical and impartial commitment, as well as in line with the National Health Policy. The Division of Community Medicine will provide a unique, exciting educational experience for Community Medicine and Health Sciences integrated, both at the undergraduate and PG level, in a dynamic state of grant, research, recognition, critical thinking and independent learning.

CONCLUSION

It will provide remote, community-based, local medical care, as part of its management efforts. The overarching purpose of educating college students in Community Medicine is to establish them to serve as local and primary care physicians in accordance with the Community Health Goals for All purposes and in accordance with the broad rules set by the Medical Council of India. The aim is to bring in a qualified general health professional and health educator who can act as head of the health team and who can identify local health needs, and fulfil sound ethical obligations and in relation to community goals. The point is to appoint them as head teachers, trainers, scientists, transmission specialists, health promoters, coordinators and managers.
