Techno pathogenic effect; a set of factors and processes that have any kind of negative effect or impact on living organisms resulting from scientific and technological progress of mankind. This is a summary of ideas and methods for protecting the public from the negative impact of electronic technology. While conducting research, the author tried to clearly define the prevailing negative impact on living of Torsion Fields (TF) in comparison with electromagnetic radiation. Electromagnetic fields warm the tissues of a person using all sorts of gadgets, while torsion fields affect the gene level. Much attention is paid to the technology of protection from torsion fields. American biologists drew attention to this phenomenon, calling such radiation "non-classical electromagnetic radiation". The Specific Absorption Rate (SAR) is considered as an official standard for measuring the effects of Electromagnetic Radiation (EMR) from mobile phones on human brains. However, the biologists do not consider SAR measurements as an accurate representation of mobile phone EMR effects on the human brain in real life. As an alternative of SAR the increasing number of scientists uses the biological systems for evaluation of harmful effects of mobile phone EMR. In the above-mentioned works the positive moment is a reference to "non-classical" electromagnetic fields though their physical nature has not been disclosed. In our opinion the "non-classical" electromagnetic fields are TF. We need to convey to people the truth about the impact of electronic technology on the living.

This paper responds to disturbing inquiry concerning conceivable wellbeing impact of mobile phone radiation and different wellsprings of electromagnetic radiation and what to look like after the general's wellbeing. No machine within recent memory has discovered more customer acknowledgment than the PDA, yet a propensity of worry about conceivable wellbeing impacts has infested open mindfulness since

1992, when reports started showing up of individuals, who'd created cerebrum tumors subsequent to utilizing the gadget. Individually, disturbing signs showed up in logical examination: that the creating skulls of kids are entered profoundly by the electromagnetic radiation produced from a wireless; that the blood mind hindrance, which forestalls attack of the cerebrum by the poisons, can be undermined by phone radiation; radio recurrence radiation makes micronuclei in human platelets, a sort of hereditary harm known to be an analytic marker for malignant growth, and most startlingly, that there is almost no data about the alleged nonclassical electromagnetic radiation, which drew the consideration of American biophysics. In this work the positive second is a reference to "non-traditional" electromagnetic fields however their physical nature has not been uncovered. As we would like to think the "non-old style" electromagnetic fields are torsion fields (TF) that comprise of virtual particles – virtual electrons and positrons and other virtual particles. TF of any item contain data about basic and quantitative creation of its issue and structure including a segment that speak to data about the turn condition of this issue (revolution boundaries: precession and nutation), which change in the procedures of collaboration of TF. Accordingly the TF are additionally called "enlightening" ones. From this point forward we will familiarize the perusers with the topic of the virtual particles and their consequences for the human body with the accessible for us consistency and completion. Techno pathogenic impact - a lot of variables and procedures that have any sort of negative impact or effect on living life forms coming about because of logical and mechanical advancement of humankind. In our work we center around the piece of our aggregated material regarding the matter, outline a further effect of base stations of cell phones on a living through the geodynamic zones and the geopathogenic zones of the Earth. Every single electronic gadget create specialized TF. Huge measure of free radicals

creates in the body under their impact. To forestall a negative effect on the living need to fit the physical vacuum. The activity of these harmonization gadgets depends on the disposal of the asymmetry of physical vacuum segments. We have built up the gadget of the physical vacuum harmonization.

Techno pathogenic impact - a lot of elements and procedures that have any sort of negative impact or effect on living creatures coming about because of logical and innovative advancement of humankind. In our work we center around the piece of our collected material regarding the matter, show a further effect of base stations of cell phones on a living through the geodynamic zones and the geopathogenic zones of the Earth. The geodynamic zone of the Earth are sun oriented receptors and techno pathogenic impacts. The parts of the vortex of sun based radiation influence the Earth and significantly affect the adjustment in the electron discharge gadgets mark the progress from the sunlit side of the Earth in shadow. The Sun during the day illuminates broad ultra high stream Earth, and around evening time on the concealed side of the Earth stream is the aftereffect of the cooperation of sunlight based radiation vortex with the center of the Earth (www.spinor.kiev.ua). It was dictated by LLC "Spinor International" (Ukraine), SARL "Earth" (France) and Association «Prosantel» (France) that the establishment of poles base stations (Figure 3) and wind turbines at the convergence of the shortcoming zones, which is a characteristic relocation of groundwater, or geopathogenic zone, causes the presence of fake radiation of these zones and the spread of radiation happens along regions issues or discontinuities along the pivotal in the dirt.
