

# Climate change, population drift and violent conflict over land resources in northeastern Nigeria

**Emeka E Obioha**

Department of Social Sciences Walter Sisulu University Mthatha, South Africa

## Abstract

In the recent times, due to the increasing rate of global warming, the northeast region of Nigeria has been experiencing continuous climatic change characterized by drastic reduction in rainfall, increase in the rate of dryness and heat, which makes it a fast-growing arid environment, with depletion in the amount of water, flora and fauna resources on the land. In response to the pastoral and arable farm occupational needs of the people, there has been continuous population drift southward where there are more fauna, flora and water resources. Following the above, an important question that needs to be addressed is how has the pressure over scarce resources consequent to climatic change led to communal civil violent conflict in the area? And what have been the patterns over the years? Against this background, this work focuses on investigating the chain of interactions between climate change, population drift ...

## Biography:

Emeka E Obioha qualifications are DTech in Policing (TUT, RSA) 2017, MTech in Policing (TUT, RSA) 2014, Bsc in Police and Security Studies (BUSE) 2009. His Courses taught are Criminology, Commercial Crime, Criminal Intelligence Analysis, National Security Analysis and Contemporary Policing
