### Editorial Note

Internal medicine or general internal medicine (in Commonwealth nations) is the medical specialty dealing with the prevention, diagnosis, and treatment of internal diseases.

General internal medicine specialists do not provide necessarily less expertise than single-organ specialists, rather, they are trained for a specific role of caring for patients with multiple simultaneous problems or complex comorbidities.

Insights in Biomedicine journal aims to encourage interdisciplinary discussions and contributing to the advancement of medicine, benefiting readers and authors by accelerating the dissemination of research information and providing maximum access to scholarly articles.

Considering the importance of human health and emergency medical and clinical issues associated with it, prime attention towards biomedical research is of great significance. Thus, providing a common and enriched information sharing platform.

Peer review methods are used to maintain quality standards, improve performance, and provide credibility. The main goal of this practice is to improve the relevance and accuracy of scientific discussions.
