

Market Analysis - Hepatitis Congress 2020

Dr. Vinod

Assistant Professor, Hindu Rao Hospital & NDMC Medical College, India, E-mail: drvinodnikhra@gmail.com

Global Hepatitis and liver diseases therapeutics market size was valued at USD 7,498.2 million in 2014. Key drivers of the market include increasing incidences of hepatocellular carcinoma and other liver diseases along with huge untapped needs of patients suffering from such diseases. Furthermore, growing global base of geriatric population is expected to enhance market demand over the forecast period.

The presence of strong pipeline and extensive R&D expenditure by **pharmaceutical** and biotechnology companies are the vital factors expected to propel liver diseases therapeutics market growth over the forecast period.

Liver diseases therapeutics market is experiencing growth mainly due to rapid new product lines launch. For instance, Incivek and Victrelis are the new products for the treatment of liver diseases. A strong pipeline of drugs such as GS-7977 and ThermoDox and their expected commercialization are expected to further accelerate market growth.

Rising healthcare awareness in the developing countries, strategic alliances, and partnerships between the key players of the market boost the industry growth. However, side effects and risks associated with current medication along with strict FDA and other government approval norms and availability of alternate treatment procedures act as barriers for the market.

This market is segmented on the basis of the region into North America, Europe, Asia Pacific, and Rest of World. The global market is expected to reach USD 12,095.3 million by 2022. High growth is justified by aging population in the developed economies, increasing global prevalence of liver diseases, such as hepatitis and hepatocellular carcinoma coupled with elevated demand for vaccination programs in the emerging economies, and increasing healthcare consumer expenditure in the developed economies
