Expenditure Per Capita, The Psychiatrists Market Indicators Comparison.

Importance and Scope

According to WHO, Psychiatry is defined as a state of well-being in which every individual realizes his or her own potential and can cope with the normal stresses of life, work productively and fruitfully, and are able to contribute to his or her community. **Psychological Syndrome** is the health condition that is characterized by alterations in thinking, mood, and behavior that is associated with distress or impaired functioning. Mental disorders contribute to problems that may include disability, pain, or death.

Globally, depression affects about 400 million, dementia affects about 35 million, while Schizophrenia which affects about 21 million people. Unipolar (also known as Major) depressive disorder is the third leading cause of disability worldwide, of any condition mental or physical, accounting for 65.5 million years lost. Overall list, responsible for 23.7 million DALYs globally, while other drug-use disorders accounted for 8.4 million. Schizophrenia causes a total loss of 16.8 million DALY, and bipolar disorder 14.4 million. Panic disorder leads to 7 million years lost, obsessive-compulsive disorder 5.1, primary insomnia 3.6, and post-traumatic stress disorder 3.5 million daily. Over one's entire lifetime, the average American has a 47.4 percent chance of having any kind of mental health disorder. It has been reported that, in Germany, depression is ten times more frequent.
