# Primary Health Care for Pregnant Women through Health and Wellness Centers (HWC)

**Humeraha Nazneen**

Nizam College, Osmania University, Hyderabad, Telangana, India

The Essential Medicinal services group at the HWC would fill in as the support of Complete Essential Wellbeing Care and emotionally supportive network, for arranging, conveyance and observing administrations for the characterized catchment populace. When the HWCs have been chosen, populace specification to encourage empanelment is a basic initial step. So as to guarantee evenhanded populace inclusion and to address issues of minimization, the cutting edge laborers would make populace based family unit records and attempt enrollment everything being equal and families living inside the catchment territory of a Wellbeing and Health Center. It is this enrollment that is alluded to as empanelment. It is a privilege of anybody, occupant around there to be selected. Care ought not be denied to the individuals who are not enlisted yet look for care at the HWC. A functioning procedure of enrolment is supported to guarantee that there is a functioning contact between the HWC group and the entitled populace. Empanelment of all people to a specific HWC serves a few jobs. It establishes the framework for trust between the network and the essential human services group. It proclaims the HWC as the principal port of call for wellbeing for the network that the administration is giving. It makes the HWC answerable for the wellbeing of populace, and it empowers a facilitatory job for access to optional and tertiary consideration through its referral systems and linkages. At last it additionally gives follow up help according to the treatment plan gave by the higher office. Empanelment of people and families would likewise encourage checking general inclusion for all projects viz. Maternal and Kid Wellbeing, Family Arranging, Vaccination and incessant malady screening, long haul transmittable infections. It additionally empowers a reason for installment by capitation at a later stage, which would be generally helpful for HWCs taking into account bigger than anticipated populaces. Care in pregnancy and child birth by health care services are taken up at three levels like Community Level, the Health and Wellness Centre- Sub Health Centers, the Referral Site.

At community level early analysis of pregnancy. Guaranteeing four antenatal consideration checks. Guiding in regards to mind during pregnancy including data about nourishing prerequisites. Distinguishing high hazard pregnancies and development. Empowering access to Bring home apportion from Anganwadi focus. Follow up to guarantee consistence with IFA in typical also, frail cases. Encouraging institutional conveyance and supporting birth arranging Baby blues care visits. Recognizing complexities identified with labor, baby blues complexities and encouraging convenient referral.

At the health and wellness centre- sub health centers early enlistment of pregnancy and giving of ID number and mother and kid security card. Antenatal registration including screening of Hypertension, Diabetes, Iron deficiency, Vaccination for pregnant lady TT, IFA and Calcium supplementation.
