

## Revision of the doctrine of acute pneumonia-an inevitable prerequisite for solving the problem

Igor Klepikov

Tel-Aviv Medical center, Israel

### Abstract

Excessive fascination with antibiotics as a universal remedy gradually and imperceptibly narrowed the perception of the nature of many diseases. To date, the main treatment of acute pneumonia (AP) is similar to the treatment of diseases with fundamental differences in their localization, mechanism of development and clinical manifestations, and the result of medical recommendations is an elementary empirical distribution of antibiotics between different categories of patients. Such a primitive approach to treatment inevitably led to the transformation of views on the nature of AP, which in recent years is increasingly interpreted not as an inflammatory, but as an infectious process.

In addition, the following studies were carried out: 1. Experimental model AP (4 series of experiments, 44 animals) to obtain a model of pleural complications (certificate for invention № 1631574, A1, November 1, 1990, USSR). 2. X-ray examination with contrast of 56 anatomical lung preparations with various forms of AP taken from deceased patients. 3. Record of comparative rheopulmonography before and after treatment procedures (36 patients). 4. Analysis of monitoring and treatment of 994 children with AP and its various destructive and pleural complications. The revised treatment package was also used in 102 patients who already had pleural changes at the time of hospitalization, despite the initial period of the disease. In this group of patients, rapid recovery without lethal outcomes was also achieved, but the final results depended on the nature of initial pleural changes.

### Biography:

Igor Klepikov worked as Pediatric Surgeon in Russian State Institute for Post-Graduate Medical Studies Novokuznetsk (Russia) and in Tel-Aviv Medical Center (Israel). Igor did research in Public Health, Respiratory Medicine and

Pulmonology. Continuation of these studies is the current project- "the new doctrine of acute pneumonia-a guarantee of prevention of purulent and destructive complications." Igor Klepikov was born and studied in the USSR. Pediatric Surgeon is the highest qualification in Russia and Israel with experience of over 40 years, MD, professor. He published over 140 scientific publications, patents and 2 monographs. Medical Doctor (M.D.) in 1971 at State Medical Institute Kemerovo, USSR, Russia.
