

Sisu To A New You: Self Help Plan for Concussion/mTBI

Kelly Thune, B.S., M.A.T., C.A.S. Kelly Education Consulting, Fayetteville, New York, USA

Abstract:

Sisu (both noun and verb) is a Finnish word that loosely translates to having perseverance, integrity, and tenacity when faced with life's most significant challenges with an emphasis on short term emphasis, action mindset, and a concept that is emerging in the field of positive psychology. Literature in concussion/mTBI therapy including John Leddy's April 2019 study regarding concussion and submaximal exercise crossed with the Emilia Lahti's research on sisu provides the basis of this unique cultural-based self help plan. The polarity of pre-brain injury capacity and post-brain injury capacity provides a basis for change. The inspiring elements of this plan are:

- Sisu requires confronting your challenges.
- Sisu is finding enjoyment in discomfort.
- Sisu demonstrates exercise/training is medicine.
- Sisu involves the role of reflection.
- Sisu is learning and reason informed.
- Sisu is making connections and strengthening relationships (including asking for help.)
- Sisu is finding balance and purpose, visioning, and doing.
