

What do viruses like HIV & Corona have in common with exosomes ?

Robert O. Young

PH Miracle Centre, USA

Abstract:

There is only one sickness, one disease and one treatment. The one sickness and onedisease is the over-acidification of the blood and then interstitial fluids due to an inverted way of living, eating, drinking, breathing, thinking, feeling and believing. There are six major contributing factors that lead to the declining acidic pH of the body fluids. As the pH of the body fluids become compensated by these six contributing factors and the body cell membranes and genetic material begin to degenerate the cells release exosomes as a defense to activate and support the lymphocytes to release oxygen species or antioxidants to reduce the acidic loads stored in the interstitial fluids of the Interstitium. The one treatment is to support the immune system with increased amounts of reduced oxygen (O-) and reduced hydrogen (H-) to restore the alkaline design of the body fluids, open up the channels of elimination in order to remove dietary, metabolic, respiratory and environmental toxic acidic waste held in the interstitial fluids of the Interstitium and thus restoring health, energy and vitality to the body.
