KERATOCONUS: ETIOPATOGENESIS, REAL CURE AND MICROSURGICAL CORNEAL CORRECTION

Massimo Lombardi

Centro di Medicina Rigenerativa Oculistica, Roma- Italia

The author presents the discovery of fungal corneal infection as responsible of the origin and progression of Kertoconus sickness followed up with the already experimented biological Treatment that gives a definitive resolution to ectasia-progression and finally the Micro-Surgical-Corneal-Incisional-Technique, that has demonstrated (up to now a day), that this technique (presented for the first time at "Atlanta ISRS Congress in 1995") is still the only realiable one (after 35 years of "Follow Up"), that can give an "Implosive" and "Flattening" corneal effect, to correct permanently the refractive secondary error and to restore a definitive Sight Recover
