Pediatric Dermatology-Quiz

Regina Folster-Holst

University Medical Center Schleswig-Holstein, Germany

Pediatric dermatology shows a very broad spectrum. This includes infections, inflammatory dermatoses, allergies, autoimmune diseases, auto-inflammatory syndromes and tumors. Some diseases, such as the erythema toxicum neonatorum, occur only in neonatal age.

The many diverse diseases all have a specific pattern, which includes morphology, distribution, history (of the patient and the family), cutaneous and extracutaneous symptoms. The pediatric dermatology quiz will reflect these patterns.

Biography

Regina Folster-Holst completed her PhD in 1984 from Christian-Albrechts-University, Kiel, Germany. After a Medical Assistant time in a children's clinic for Cystic Fibrosis and Allergy at Amrum, Germany, she began her specialist training for dermatologists at the Department of Dermatology, Kiel, Germany, in November 1985. In 1992, she was recognized as a Specialist in Dermatology and Allergology. Her habilitation was in 2003, at the Medical Faculty of the Christian-Albrechts-University of Kiel and the appointment as a Professor took place in 2007. Since 1992, she works as a Senior Physician at the University Medical Center Schleswig-Holstein, Department of Dermatology in Kiel, Germany. Clinical activity and research are priority for her, primarily in the area of Atopic Dermatitis, Pediatric Dermatology, Exanthems in Childhood and Parasitosis.
