Development and validation of a spectrophotometric method of α -Lipoic acid in dietary supplementsAthanasia Varvaresou¹, Spyridon Papageorgiou¹, Maria Giannakou², Irene Panderi³, Fotini Mellou¹, Protopapa E¹ and Athanasselis S³¹University of West Attica, Greece.²National Hellenic Research Foundation, Greece³National and Kapodistrian University of Athens, Greece

α -Lipoic acid (α -LPA), 1,2-dithiolane-3-pentanoic acid, is an universal antioxidant present in prokaryotic and eukaryotic cells. It acts as a cofactor in different multi-enzyme complexes. It plays an important role in the synergism of antioxidants by directly recycling vitamin C, glutathione and coenzyme Q10 and indirectly recycling vitamin E. Due to its unique properties, it has also been administrated in both prevention and treatment of various oxidative stress related diseases such as alcoholic liver disease, heavy metal poisoning, diabetes, glaucoma, ischemia/reperfusion injury of heart and neurodegenerative disorder. A simple, sensitive and rapid analytical method for the determination of α -Lipoic acid in dietary supplements in capsule dosage form based on reverse phase high performance liquid chromatography with UV detector at 340 nm was developed. The determination was performed on a Luna C18 analytical column (150 x 4.6mm i.d., 5 μ m); the mobile phase consisted of 0.05 M KH₂PO₄ (pH 4.5) mixed in acetonitrile in a ratio (60:40, v/v) and pumped at a flow rate 1.00 ml min⁻¹. The retention time of α -Lipoic acid was 8.5 min. The method was validated for parameters like linearity, precision, accuracy, stability, specificity and ruggedness, as per ICH norms. Calibration graphs are linear in the concentration range of 5-30 μ g/ml, while the correlation coefficient was at 0.999, 0.998 and 0.999 respectively. The intra- and inter day R.S.D values were less than 1.9 %, while the relative percentage error Er was less than 4.1%. LOD and LOQ was found 1.26 μ g/ml and 3.83 μ g/ml respectively. This method is found suitable for rapid and reliable control of α -Lipoic acid dietary supplement in capsule form.

JOINT EVENT

9th Edition of International Conference on **Chemistry Science and Technology**
&
11th International Conference & Expo on **Chromatography Techniques**

April 22-24, 2019 Dublin, Ireland

Biography

Athanasia Varvaresou is the Director of the Division of Aesthetics and Cosmetic Science of the Department of Biomedical Sciences in University of West Attica, Athens, Greece and Professor in Cosmetic Science. She is graduate from the School of Pharmacy, University of Athens. Her PhD is in synthesis and biological evaluation of xanthene derivatives used in cosmetics. She worked as a post-doctoral research fellow in the University of Athens from 1996 till 2002. She is a reviewer for scientific journals. Her research interests are: Development of anti-aging cosmetics, efficacy tests of cosmetics and synthesis and structure elucidation and analysis of bioactive compounds.
