

9th Edition of International Conference on **Chemistry Science and Technology**
&
11th International Conference & Expo on **Chromatography Techniques**

April 22-24, 2019 Dublin, Ireland

Chemical science is the major tool consists of different natural and chemical sciences use for the basic need of life in the world

Muhammad Usman

Govt of Agricultural Research System, Pakistan

The aim of presentation consist of chemical science was studied and reported that chemical science is the major tool for presenting in various forms of our day to day living in the developing countries of the world. Chemical science is the science of matter, the branch of the natural sciences dealing with the composition of substances and their properties and reactions. The study reported that chemical science is the branch of natural/pure sciences including physical science, physics, chemistry, earth science, ecology, geology, meteorology, life science, biology, zoology, botany, social sciences, formal sciences, mathematics, statics, systems theory, theoretical computer science. The chemical science is the directly related with chemistry. Chemistry is often known as "the central science" because of the key position it occupies in modern science and engineering. Recent developments in the chemical sciences are increasingly directed toward the study of phenomena at the Nano Scale, the size range intermediate between individual molecules and macroscopic matter. In other words, the systematic body of knowledge that documents the structures, properties, and composition of various substances as a result of chemical reaction or bonding is a chemical science. Water which we consume in our daily life for example is produced as a result of chemical between one molecule of oxygen and two molecules of hydrogen. Chemical sciences thus is present in various forms in our day today living. The study further reported and concluded that chemical science is the major tool consists of different natural and chemical sciences use for the basic need of life in the world.
